Abstract

Real world, Washington practitioner workspaces inform this paper. It explores how to develop capstone courses, such as in comparative politics and international relations that integrate experiential learning and research-based pedagogy early in a course of study. This equips students for the complexities of 21st-century political science careers. By combining hands-on experiential learning—such as case studies, debates, global visits, fieldwork, and simulations, it allows students to bridge the gap between classroom knowledge, rigorous inquiry, and the practical demands of a political science career. It discusses insights into designing courses that connect students directly with the mechanisms to increasing literacy levels, and collaboration. This paper argues that experiential learning, when systematically integrated into capstone courses, enhances students' critical thinking, adaptability, and problem-solving skills. Key findings include institutional challenges, gaps in early skill development and competencies. Appropriate literacy levels for career readiness, are possible, if capstone courses are reimagined.

Keywords: Political Science Education, Experiential Learning, Capstone Courses, Research-Based Pedagogy, 21st-Century Skills

EXECUTIVE SUMMARY

In the rapidly evolving landscape of tertiary education, political science pedagogy must adapt to meet the complex demands of 21st-century workforce environments. This paper explores the transformative potential of capstone courses that strategically merge experiential learning, research pedagogy, and critical 21st-century skills development. Real-world empirical insights from Washington, District of Columbia (D.C.) metropolitan area workspaces and from local area colleges and universities informed this paper. The central argument is that capstone courses combining hands-on experiential learning and rigorous research prepare students for today's complex political science careers, as well as those in the future. This paper critically examines how innovative pedagogical approaches can fundamentally reshape student preparedness for political science careers in the 21st Century.

Main Argument

This paper presents a compelling argument for a new tertiary education course model that extends beyond the traditional boundaries of a classroom. Innovative capstone courses that integrate experiential learning and research aim to equip students with the competencies needed to navigate the complexities of contemporary political science careers, including critical thinking, global perspective, and practical application.

Capstone Course Implications

- If experiential learning components are systematically included and supported, then courses can bridge the gap between academic knowledge and practical application, better preparing students for real-world challenges in political science.
- If capstone courses emphasize hands-on components, integrate real-world practitioner experiences, then students will be future-ready and equipped with practical skills that enhance success essential for 21st-century professional roles in political science.
- If rigorous research is systematically integrated into capstone course design, then students will develop advanced 21st-century skills to navigate dynamic career challenges within Comparative Politics (CP) and International Relations (IR), and cross-country workforce interactions.

Bridging academia and career readiness is important. Ultimately, this paper advocates for a paradigm shift in political science education—transforming capstone courses from academic requirements into strategic professional development platforms that prepare students to navigate the intricate, interconnected political landscapes of the 21st Century.

INTRODUCTION

Tertiary education is at a pivotal juncture, where the traditional models of teaching and learning must adapt to meet the evolving demands of the 21st-century workforce. In the rapidly evolving landscape of tertiary education, traditional pedagogical approaches will need to be fundamentally reimagined to meet the complex demands of the 21st Century. As argued by scholars like Fitzgerald, academic institutions must transform their educational models to address emerging challenges of globalization, digital transformation, and interdisciplinary problem solving.¹ The core of this transformation lies in bridging the critical gap between academic learning and real-world skill development. This paper investigates a critical question: How can capstone courses in International Relations (IR) and Comparative Politics (CP) be designed to integrate experiential learning and research-based pedagogy to prepare students for the complex realities of modern professional environments?

Prior Knowledge

Contemporary research underscores a pivotal shift towards skill-based education, where practical, industry-relevant competencies are prioritized, alongside traditional academic knowledge. Ahmad's research highlights that institutions must reorient their curricula to align more closely with job market requirements, moving beyond passive knowledge transmission to active skill cultivation.² This approach is echoed by Peters and Beeson, who emphasize the significant disconnect between the skills employers seek—such as communication, critical thinking, and adaptability—and those typically developed in academic settings.³

Experiential learning emerges as a key pedagogical strategy in this educational recalibration. By integrating simulations, case studies, internships, and collaborative projects, educators can create more engaging and impactful learning environments. Barrow and Jocelyn's work demonstrates how such approaches not only deepen student engagement but also provide critical real-world context, enabling students to translate theoretical concepts into practical understanding.⁴

As the role of educators transforms from knowledge providers to learning facilitators, the focus increasingly centers on mentorship, guidance, and creating dynamic learning experiences that prepare students for complex professional landscapes. This reimagined educational paradigm represents more than a methodological adjustment—it is a fundamental reconstruction of how we conceptualize learning, skill development, and professional preparation in an increasingly interconnected and rapidly changing world.

The significance of this research lies in its potential to bridge the persistent gap between academic preparation and practical career readiness. Capstone courses serve as the culmination of students' academic journeys, providing an opportunity to synthesize theoretical knowledge with practical skills. However, current approaches often fail to equip students with the competencies required to navigate dynamic and demanding fields like international security, policy analysis, and global affairs. Addressing this gap is not merely an academic exercise but an essential step toward producing graduates who are future-ready in a world

increasingly shaped by artificial intelligence, globalization, and complex geopolitical challenges.

Existing scholarship and analysis of 21st-century pedagogies exploration of education's impact on economic growth, underscores the importance of integrating sophisticated learning outcomes into tertiary education curricula.⁵⁶⁷

This study seeks to advance the field by demonstrating how innovative capstone course designs can contribute to prior scholarship. By incorporating case studies, internships, and simulations, as well as fostering critical skills like analytical reading, argumentation, and global literacy, capstone courses can transform from academic milestones into strategic platforms for professional development.

Main Argument and Findings

This paper argues that experiential learning, when systematically integrated into capstone courses, enhances students' critical thinking, adaptability, and problem-solving skills. Key findings from this study include:

- **Institutional Resistance:** Challenges in aligning capstone courses with institutional goals and securing administrative support.
- **Early Skill Development:** The need for students to engage in research and experiential learning from the start of their academic programs.
- **21st-century Competencies:** The importance of equipping students with advanced reading and argumentation skills to excel in policy and security workspaces.

Empirical Approach

The study employs a mixed-methods approach, combining qualitative insights from internship participants with a review of existing capstone course designs. By synthesizing this data, the paper highlights best practices and identifies actionable strategies for educators and policymakers.

Roadmap

This paper begins by providing a foundation for experiential learning and its application in capstone courses, offering insights into the current literature and prevailing educational practices. It then explores key issues and challenges, such as institutional inertia and resources that hinder the integration of experiential components into capstone design. The findings and analysis section presents case studies and innovative strategies that demonstrate the practical implementation of these principles. Following this, the implications and recommendations section outlines actionable steps for institutions to adopt future-ready pedagogies. The paper concludes by addressing limitations and suggesting avenues for future research, before summarizing the contributions and transformative potential of innovative capstone courses.

FINDINGS

The findings are synthesized in Table 1, below. Table 1 summarizes university undergraduate student participants' internship experiences. Each participant is anonymized with a code (e.g., P1, P2, P3, etc.) and the organizations they worked for in 2021 is labeled neutrally (e.g., Org A, Org B, Org C.).

The survey participants comprised 30 students from political science and global governance programs at colleges and universities in the D.C. metropolitan area. The sample was made up of undergraduate students, representing multiple academic levels and policy-related disciplines. Participants were primarily aged between 19 and 25, with a mean age of 22.3 years. The cohort included a gender distribution of 55% female and 45% male.

Experiences

Table 1: Summary of Participants' Internship Experiences

Participant Code	Level	Major	Organization Code	Internship Role Summary
P1	Sophomore	Government	Org A	Supporting operations and projects.
P2	Junior	Government	Org B	General administrative tasks: phones, mail, other office duties.
P3	Senior	Government	Org C	Social media management for policy; editing annual reports.
P4	Junior	Government	Org D	Developing papers on strategy, policy, and communication products.
P5	Junior	Government	Org E	Hosting events; daily office tasks; networking.
P6	Junior	Government	Org F	Administrative support, evidence prep, attorney shadowing.
P7	Senior	Government	Org G	Phone support, constituent messaging, mail handling, and assisting staff.
P8	Junior	Government	Org H	Research
P9	Senior	Criminology	Org I	Client intake, document prep, interpreting, research, social media outreach.
P10	Freshman	Global Affairs	Org J	Administrative duties, mail delivery, phone handling, supporting political representation.
P11	Senior	International Relations	Org K	Researching interdisciplinary issues.
P12	Junior	Public Administration	Org L	Volunteer management, program coordination, mailings, and fundraising support.
P13	Senior	Government	Org M	Administrative tasks, case notes, shadowing prosecutors.
P14	Senior	Government	Org N	Answering phones, client handling, and office support.
P15-P30	Junior	Government	Org O	General administrative tasks and duties, mail delivery, and phone handling.

Table 2: Overview of Internship Landscape for Political Science Students in 2021

Organization Type	Key Sectors	Primary Student Job Tasks	Skill Development Focus
Government Institutions	Government	Policy research, administrative support, media content creation	Diplomatic communication, policy analysis, organizational procedures
Congressional Offices	Legislative	Constituent communication, administrative tasks	Legislative activities, operations, and processes
Non-Profit Organizations	Non-governmental organization	Grant research, social media outreach, program coordination	Community engagement, specialized advocacy
Legal Firms	Law	Client intake, case documentation, legal support	Legal procedures, professional documentation
Political Campaigns	Political Party	Administrative support, phone handling, event support	Election campaign operations support, phone handling

The internship landscape for political science students reveals a multifaceted professional development ecosystem characterized by a range of organizational experiences and skill acquisition. The 30 student internships are a complex intersection between academic preparation and professional practice across government, non-profit, legal, and policy sectors.

The skills are foundational in nature. They provided participants with administrative task management, procedural documentation, community engagement and grassroots organizing, and knowledge on navigating their employer organizations.

Internships represent critical transformative experiences that bridge academic theoretical knowledge with professional practical application. They provide students with adaptive skills, professional networks, and nuanced understanding of potential career trajectories in political science.

Organizations

Chart 1: Internship Landscape Overview

Dominant responsibility of surveyed students employed in roles such as administrative, operations, and legal support appeared frequently across surveyed participants, suggesting that many internships provide foundational professional skills through administrative and legal tasks. Policy and research analysis roles were less frequent, suggesting the preparedness level of students for strategic and analytical positions in their careers. The balance of practical and theoretical training suggests varied responsibilities. This reflects the mix of hands-on and cognitive skill development, and career readiness.

Key Observations

Table 3: Participants' Comments by Theme

Theme	Example Comments	Frequency (Number of Participants)
Professional Growth and Development	"I learned valuable communication skills." / "The internship gave me hands-on experience in government operations."	15
Networking Opportunities	"This internship connected me with influential figures in my field." / "Networking with professionals helped me understand potential career paths."	10
Skill Application and Learning	"It was rewarding to apply my coursework to real-world problems." / "I gained new skills in research and analysis."	12
Challenging Experiences	"The workload was intense, but it taught me time management." / "It was a steep learning curve, especially in unfamiliar areas."	8
Administrative Tasks	"Some tasks, like filing and answering phones, felt repetitive." / "While menial, these duties taught me attention to detail."	7
Mentorship and Guidance	"My supervisor provided excellent mentorship." / "Having guidance from experienced professionals shaped my understanding of the field."	11
Broader Understanding of the Field	"This experience deepened my understanding of policy-making." / "I gained insight into the intersection of law and public service."	13
Room for Improvement	"The internship could have been more structured." / "I wish there were more opportunities for hands-on involvement."	5

DISCUSSION

The challenge that students face is a multidimensional one. In view of bridging academic theory and professional practice, the research reveals a critical imperative for reimagining political science education through capstone course design. The findings demonstrate a significant gap between traditional academic approaches and the dynamic skill requirements of 21st-century professional environments.

1. Key Pedagogical Strategies

The analysis of participant feedback and the broader findings of this study highlight several successful strategies for integrating experiential learning into capstone courses. These approaches are critical for bridging the gap between academic preparation and career readiness, equipping students with the skills necessary to navigate the complexities of 21st-century political science careers.

a) Case Studies

Incorporating case studies into a curriculum is vital. Example case studies emerge as a fundamental mechanism for translating theoretical knowledge into practical understanding. By incorporating real-world scenarios from international relations and comparative politics, capstone courses can:

- Demonstrate institutional decision-making processes.
- Develop critical analytical skills by examining how policies are formulated and operationalized.
- Provide insights into complex political dynamics and the motivations of stakeholders.

In addition, simulations offer students a dynamic platform to actively engage with political scenarios. These activities replicate real-world challenges, such as international negotiations or crisis management, enhancing student engagement and comprehension. Institutions like Georgetown University and the University of Oxford have successfully implemented case studies

and simulations to provide students with a deep understanding of how political systems operate. Moreover, a well-designed syllabus should emphasize critical reading skills by encouraging students to regularly engage with reliable news sources that capture the nuances of policymaking and global trends. Without these skills, students risk being uninformed, a significant liability in professional environments.

Case studies serve as powerful tools for demonstrating novel techniques and understanding how institutions, policies, and policy stakeholders think, decide, and operationalize their strategies. By examining factual, historical cases—such as the decision-making processes of heads of state, including American presidents and law-making institutions—students can develop critical analytical reading skills.

A comprehensive capstone course syllabus should prioritize developing students' information literacy, beginning with identifying the top ten reliable news sources essential for IR and CP students. These sources must be credible, insider platforms that capture the nuanced details of daily legislative movements, policy controversies, and broader institutional dynamics.

The ability to navigate complex information landscapes is crucial, especially given the rapid pace of communication in diplomatic capitals like Washington. Students must develop 21st-century reading skills that can discern authentic sources amid the constant flux of social media information, which is frequently subject to confirmation bias and untrustworthiness. This becomes even more critical as technological advancements, including artificial intelligence, continue to reshape information consumption and analysis.

Washington workspaces exemplify the challenges of managing information overload, with varying approaches and resource levels that can overwhelm even experienced professionals. Therefore, cultivating a sophisticated approach to source selection and critical reading is not just an academic exercise but a fundamental professional skill for emerging policy practitioners.

Debates and Argumentation

Debates play a vital role in developing students' proficiency in argumentation and critical thinking. By engaging in structured debates, students learn to anticipate counterarguments and refine their perspectives. These activities cultivate the ability to discern misinformation, disinformation, and mal-information, a skill set increasingly important in the modern information landscape. For successful argumentation, reading, not just once a day, but throughout the day, is essential for successful careers in political science. Students must also develop the habit of staying informed through consistent engagement with credible media platforms. This reading habit ensures that they remain prepared for the fast-paced nature of professional workspaces, particularly in Washington and other political hubs. These skills are underemphasized in traditional academic curricula, and prospective students without the essential analytical reading skills will be easily identifiable as being uninformed.

Global Visits

Global visits offer students unparalleled exposure to international political environments, providing opportunities to observe and engage with geopolitical perspectives. For example, George Mason University's GLOA 101 course demonstrates how such initiatives can connect students across campuses in Fairfax and Seoul, fostering a global understanding of interconnected political landscapes. These global visits help students contextualize theoretical concepts within real-world settings, enhancing their ability to analyze and respond to global challenges in an interconnected world.

Fieldwork

Fieldwork and internships are the cornerstone elements of experiential learning, offering students practical experience that bridges classroom knowledge with workplace demands. Partnerships with governmental and non-governmental organizations enable students to:

- Connect academic knowledge to real-world challenges.
- Develop job-specific competencies, including research, communication, and organizational navigation.
- Explore career options and refine professional goals.

Organizations must ensure that these opportunities are well structured and supervised, aligning with the National Association of Colleges and Employers' competencies for career readiness.⁸ This structured approach maximizes the value of internships as a platform for skill development and career exploration.

Simulations

Simulations provide a unique opportunity for students to engage in high-pressure, decision-making environments that replicate real-world scenarios. By the time students graduate, they should have a robust understanding of critical concepts like institutions, power, and the aggregation of national interests. Simulations reinforce these concepts, enabling students to apply their knowledge in practical settings. This approach addresses the blurred lines between international relations and domestic policy, particularly in environments like Washington, D.C., where the scope and scale of demands are immense.

2. Skill Development and Career Preparedness

Capstone courses must prioritize the development of 21st-century competencies, including:

- Sophisticated information literacy to evaluate the credibility of sources.
- Continuous learning and adaptability to navigate evolving challenges.
- Cross-cultural understanding and interdisciplinary collaboration.

Traditional academic models often fall short in preparing students for the demands of the modern workforce. This research highlights several limitations, including an overreliance on theoretical frameworks and insufficient exposure to real-world political environments. By integrating case studies, debates, global visits, and fieldwork into capstone courses, educators can address these gaps and create a transformative learning environment. The dividing line between IR and the domestic issues of a nation state often becomes blurred and highly complex in Washington workspaces, as does the workforce interactions across countries.⁹ This means that the demand for skills necessary to prepare students for the pressure, scope, and scale of demands they will need to meet is ever more pressing.

⁸ How to Gauge Career Readiness Skills from Internships," U.S. News & World Report, <https://money.usnews.com/money/blogs/outside-voices-careers/articles/how-to-gauge-career-readiness-skills-from-internships>.

3. Implications for Political Science Education

This paper underscores the urgent need to reimagine political science pedagogy. Effective capstone courses must evolve from passive knowledge transmission to active, experiential learning platforms that:

- Bridge theoretical and practical knowledge.
- Cultivate critical and adaptable professional skills.
- Prepare students to navigate and influence complex global political systems.

The absence of these skills in graduates, including about what is happening from day to day will be evident to a prospective graduate's work colleagues and supervisors, risks undermining their credibility and effectiveness in professional environments. By embedding transformative pedagogical strategies into capstone courses, institutions can ensure that their graduates are equipped to meet the demands of the 21st-century political landscape.

Rethinking traditional pedagogy, instructional strategies, and course designs is vital. Rigid designs do not align with the fast-evolving world. One of the most significant findings from the analysis of internships is the predominance of clerical work among participants. A majority of interns—19 out of 30 (63.3%)—reported that their roles primarily involved routine administrative tasks such as answering phones, processing mail, and providing general office support. In contrast, only 11 participants (36.6%) had the opportunity to engage in substantive professional work that required tertiary-level analytical or strategic thinking. This imbalance suggests a systemic issue in how internships are structured, with many failing to provide the meaningful skill-building experiences that students need to prepare for advanced roles in political science and related fields.

The challenges extend beyond the nature of the tasks assigned. Many participants noted limited exposure to high-level analytical work and few opportunities to engage in strategic thinking. Overwhelming administrative responsibilities often left interns stretched thin, unable to fully explore the potential for professional growth. For example, Participant P3 reported stress related to managing time-sensitive social media tasks, while Participant P8 expressed anxiety about the intensity of their workload. Multiple participants also mentioned struggling to balance the demands of their internships with their academic responsibilities, which further exacerbated feelings of being overwhelmed.

A critical gap identified in the findings is the absence of systematic information consumption practices or institutional support to help interns stay informed. None of the participants explicitly referenced structured guidance for consuming credible news sources or contextualizing the fast-paced changes in their professional environments. This lack of preparation leaves interns reliant on peer networks and personal initiative rather than formalized academic support. Consequently, their ability to navigate workplace complexity and make informed decisions, is hindered.

The lack of institutional support emerged as another major challenge. Minimal evidence was found of structured academic guidance to prepare interns for the realities of their professional environments. Participants appeared to rely heavily on self-directed learning and ad hoc support from colleagues. This absence of formal preparation indicates a misalignment between academic training and the demands of workplace environments, leaving students underprepared for professional success.

These challenges highlight several key issues in internship skill development. First, there is a clear misalignment between academic preparation and workplace demands, with many interns relegated to low-level administrative tasks rather than gaining substantive experience. Second, the limited opportunities for skill development and strategic engagement leave students without the critical competencies required for advanced roles. Third, the lack of structured professional development support underscores a broader systemic issue in how internships are integrated into educational pathways.

The implications of these findings are profound. The data underscores a significant gap between academic training and the professional requirements of political science careers, emphasizing the urgent need for more strategic capstone course design and internship preparation. Addressing these challenges will require institutions to rethink how internships are structured, ensuring that they provide meaningful opportunities for skill-building, critical thinking, and professional growth.

4. Human Capital Implications and Shortcomings for U.S. Competitiveness in Political Science

The internship landscape reveals profound vulnerabilities in the United States' approach to developing human capital for international relations and comparative politics. The data demonstrates a systematic under-preparation of emerging professionals, with 63.3% of interns like P2 and P11 relegated to basic administrative tasks such as phone management and document processing. This pattern suggests a critical misalignment between educational investments and the complex skill demands of 21st-century global competition.

The pace and complexity of contemporary political workspaces overwhelm unprepared graduates. One P11's comment about feeling "anxiety" during an internship epitomizes the broader challenge: students enter professional environments without robust frameworks for managing information density and strategic thinking. This paper emphasizes that practitioners lacking critical information consumption skills will be "caught uninformed," a vulnerability that directly impacts national strategic capabilities in an era of rapid global communication and intricate geopolitical landscapes.

Institutional approaches to skill development appear fragmented and reactive. While internships provide exposure to professional environments, they rarely translate into meaningful skill advancement. The internship data reveals a concerning pattern: students like P3 at a government institution are creating social media content under extreme time pressures, but without structured guidance for developing deeper analytical competencies. This approach risks creating a workforce more adept at administrative tasks than at sophisticated policy analysis and strategic decision-making.

The global competition for human capital demands more than administrative proficiency, is real. Countries investing systematically in workforce development create environments where emerging professionals rapidly acquire complex skills. In contrast, the U.S. model appears characterized by incremental learning through low-value administrative experiences. The internship findings suggest that without deliberate interventions, the United States risks developing a political science workforce, ill-equipped to navigate the nuanced, fast-evolving global political ecosystem.

Ultimately, these findings underscore an urgent need to redesign political science education. Capstone courses and internship programs must evolve from passive knowledge transmission to active, skills-focused learning platforms. The goal must be cultivating professionals who cannot

just understand political systems, but dynamically interpret, anticipate, and strategically respond to complex global challenges.

CAPSTONE COURSE IMPLICATIONS AND RECOMMENDATIONS

Capstone Course Implications

- If institutions prioritize experiential learning, then graduates will be better prepared for political science careers.
- If faculty receive training in designing experiential components, then the quality of capstone courses will improve.
- If courses integrate real-world practitioner insights, then students will develop a deeper understanding of political processes.

Recommendations

- Develop partnerships with, or employ, practitioners to provide and teach real-world insights.
- Allocate funding to support internships and fieldwork.
- Design assessment tools that align with institutional goals and measure critical thinking, analytical reading, and collaboration.
- Provide students with complimentary D.C. metro rail cards.

LIMITATIONS

This paper acknowledges several limitations that may impact the generalizability and applicability of its findings. First, the analysis primarily focuses on political science education and capstone courses within this discipline. While the insights provided are valuable, they may not translate directly to other academic fields, where the nature of experiential learning and professional preparation may differ significantly. Interdisciplinary studies are needed to determine how these strategies might be adapted to suit diverse educational contexts. Second, the case studies examined in this paper are drawn from select institutions, such as Georgetown University and the University of Oxford. While these examples provide rich insights into effective pedagogical strategies, they may not fully capture broader trends across a wide spectrum of tertiary education institutions. Variations in institutional goals, resources, and student demographics could influence the relevance and feasibility of implementing similar strategies elsewhere.

Additionally, resource constraints present a significant limitation. The recommendations outlined in this paper assume a baseline level of institutional support and access to resources, which may not be equally available across all colleges and universities. Financial, administrative, and staffing challenges can significantly affect the ability of institutions to integrate experiential learning components into their curricula effectively.

Future research should address these limitations by exploring the interdisciplinary applications of experiential learning and investigating how these approaches impact student careers over the long term. Expanding the scope of analysis to include diverse disciplines and a broader range of

institutions would provide a more comprehensive understanding of how experiential learning can be optimized for different educational and professional contexts. Such research would enhance the robustness of the findings and contribute to the development of adaptable, future-ready educational strategies.

CONCLUSION

This paper demonstrates that integrating experiential learning and research-based pedagogy into capstone courses equips students with critical thinking, collaboration, and research skills essential for thriving in 21st-century careers. By merging academic frameworks with practical experiences, institutions can bridge the gap between theoretical knowledge and real-world applications, ensuring that students graduate as future-ready professionals. These findings underscore the importance of incorporating practitioner insights, innovative pedagogical strategies, and effective assessment tools into tertiary education curricula to address persistent skills gaps and enhance career readiness.

The objectives of this study were to explore how experiential learning could be systematically be integrated into capstone courses to prepare students for complex professional environments and to identify strategies that effectively bridge the divide between academic preparation and practical application. This paper contributes unique insights by highlighting the transformative role of case studies, debates, global visits, fieldwork and internships, and simulations in equipping students with advanced competencies. Unlike previous research that often focuses on theoretical pedagogical frameworks, this study emphasizes actionable strategies grounded in practitioner perspectives and real-world applications in the 21st Century. This approach provides a novel lens through which to examine the intersection of academic training and professional development, offering practical solutions to address existing challenges.

Furthermore, this study advances the discourse by emphasizing the broader societal implications of experiential learning in political science education. Beyond preparing students for individual success, these strategies can foster the critical thinking, literacy levels, and collaborative skills necessary for addressing global challenges, from conflict resolution to public policy. By equipping students to move beyond rigid and uncompromising positions in conflict and security scenarios, capstone courses have the potential to nurture a generation of leaders capable of fostering dialogue and promoting peace.

The findings presented in this paper highlight the urgent need for institutions to reimagine traditional approaches to political science education. This study provides a roadmap for designing capstone courses that prioritize adaptability, interdisciplinary, and engagement with real-world challenges. By addressing the skills gaps that often prolong students' career readiness, these approaches not only enhance individual outcomes but also contribute to the development of a more informed and capable global workforce, in the 21st Century.

To conclude, this paper posits that a future where tertiary education produces students who succeed because they possess 21st-century skills is within reach. The integration of experiential learning into capstone courses represents a significant step forward in achieving this vision. By fostering critical thinking, bridging divides between theoretical and practical knowledge, and preparing students to address complex global issues, tertiary education institutions have the power to transform not just individual careers, but the very fabric of our interconnected world.
